- Nation State Adversary TTPs, Tools & Trends

### Comprehensive Capabilities:

- 1M+ Data Sources
- 4.6B+ Intelligence Cards
- Data Ontology
- AI / ML
- Predictive Analysis
- 140+ Integrations
- Complete Mission Alignment
- Optical Character Recognition

## What products are available from Recorded Future?

**User Licenses:** Comprehensive access to the Recorded Future platform on the unclassified domain, enabling access to contextualized intelligence from over 1 million sources. Our platform offers a range of powerful features, including custom alerts, visualizations, tailored queries, conversational AI / analysis and access to over 8 billion intelligence cards. Users can also leverage thousands of finished intelligence products that cover cyber and geopolitical matters spanning from tactical to strategic levels, created by our in-house intelligence experts, known as the Insikt Group.

**Analyst on Demand (AoD) Services:** On-demand, unclassified RFI responses from Recorded Future's Insikt Group, a team of experienced intelligence analysts with diverse expertise and backgrounds. These services encompass a wide range of offerings, such as APT analysis, custom hunt packages, terrain analysis, geopolitical analysis, disinformation analysis, malware analysis, and more. Final products are tailored to your specific requirements, with flexibility in delivery frequency (one-off, weekly, or monthly) and format options (briefings, summaries, short reports, deep-dives, baselines).

**Data / Application Programming Interface (API):** Feed Recorded Future data and intelligence into your capability of choice. Recorded Future acts as a central hub of intelligence - seamlessly integrating our intelligence into your preferred systems, technologies, and workflows

- Hunt-forward and cyber protection missions
- Big Data Platform (BDP) integration
- Custom tool/platform integrations (GOTS, Splunk, Elastic, Palantir, Esri, ServiceNow, Analyst1, and many others)

### Tailored Client Support:

- Consultant led Recorded Future workshops (on-site or virtual): Basic and advanced training for larger groups, and tailored training aligned to specific team missions/intelligence requirements
- Recorded Future University: Standardized training on Recorded Future platform best practices
- Monthly new user basic training: familiarize analysts with features and functions of Recorded Future
