# Recorded Future for Exabeam Advanced Analytics

Detect and respond to threats faster with actionable context at your fingertips. Recorded Future delivers security intelligence to arm security and IT teams that use Exabeam Advanced Analytics with the real-time information they need to detect incidents earlier and prioritize their findings with confidence.

## Contextualized Intelligence

Contextualized intelligence is a crucial component of any truly proactive security strategy. Recorded Future empowers faster, more informed security decisions with relevant insights that are updated in real time and integrated with your existing infrastructure. Security intelligence from open, technical, and dark web sources helps reduce security risk by automatically correlating against telemetry data within your Exabeam environment for real-time detection of potential threats.

The explosive growth of indicators makes finding the needle in the haystack extremely resource-intensive for already overwhelmed security teams. With Recorded Future intelligence, security teams using Exabeam Advanced Analytics can easily discover and validate findings. Real-time natural language processing automatically summarizes information on more than a billion threat-related entities while providing full access to the original sources of intelligence.

Utilizing the Recorded Future browser extension over Exabeam allows users to enrich findings with evidence-based, real-time risk scores and risk rules — all without having to leave Exabeam Advanced Analytics. This empowers users to confidently prioritize the most important findings in their environment, simplify workflows, and maximize the ROI of existing cybersecurity solutions.

## BENEFITS

- Detect previously unknown threats within Exabeam Advanced Analytics
- Respond to findings faster with real-time, high-confidence context
- Maximize investments in Exabeam Advanced Analytics and accelerate SecOps workflows

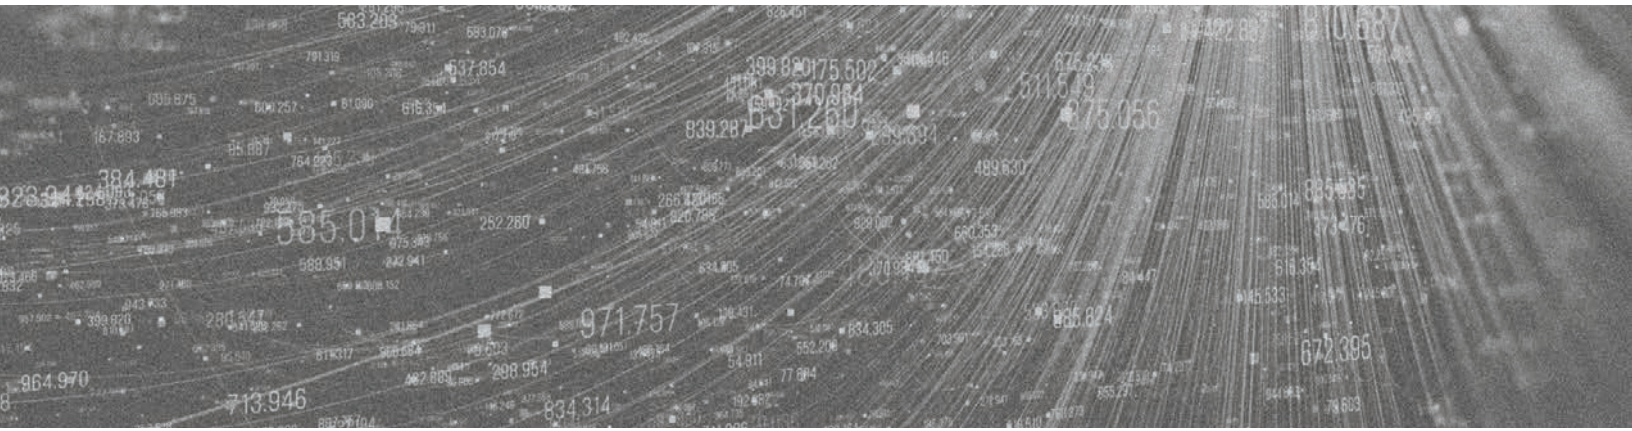

## RESULTS\*

- Identify 22% More Security Threats Before Impact
- Improve Response Times by 63%

*\*Learn more about the business value Recorded Future brings to clients in our [IDC Report](#)*

## BENEFITS

- Recorded Future's risk lists for IPs, hashes, domains and URLs
- Out-of-the-box correlation against the client's raw logs, endpoint data, and network traffic
