

# Recorded Future Fusion: A Solution for Integrated Threat Intelligence

## Challenge

Defending your organization against cyber threats requires an understanding of not only what's happening within your organization, but also what's happening externally. Much of this information exists in disparate sources, creating variability within your team internally, with people accessing different information to make critical decisions. Threat intelligence platforms (TIPs) have traditionally played the role of aggregating all threat intelligence in one central location. However, TIPs are only as valuable as the information available in the solution. As a result, in order to maximize value, feed aggregation and customization should be an integral part of a complete threat intelligence solution.

## Solution

Recorded Future Fusion eliminates the need for purchasing a standalone TIP. Instead, it adds the necessary functionality on top of Recorded Future's already extensive threat intelligence to provide a complete solution. Key benefits of leveraging Fusion as part of an integrated threat intelligence solution include:

- **Streamlined access with centralization:** Aggregate your proprietary and internal sources with Recorded Future-sourced intelligence. Data is analyzed by our Threat Intelligence Machine and delivered in a cohesive and easy-to-consume format. This enables all users to have consistent access to all intelligence in real time.
- **Improved efficiency with collaboration:** Include internal analysis and insights directly into Recorded Future. With analysis built into the solution, teams can collaborate on investigations, research, and reports on a single platform.
- **Better results with customization:** Tailor threat intelligence to specific use cases before integrating with third-party solutions. Customized intelligence delivers more high-fidelity alerting, empowering teams to focus on what is most important.

Recorded Future offers the only universal threat intelligence solution, giving you the ability to add proprietary feeds to our already rich threat intelligence and then customize the data before integrating it into third-party solutions. These capabilities combined give you the most holistic view of your threat landscape, helping you make informed decisions quickly with minimal research effort.

### Recorded Future Fusion — All Intelligence in One Place

Aggregate all intelligence including:

- Proprietary feeds
- Internal risk lists
- Analyst notes and research

Customize risk lists by:

- Risk rules
- Risk score
- Date

Collaborate on analysis:

- Deep-dive research
- Internal reporting
- Centralized repository of notes

# Expand Your Use Cases With Recorded Future Fusion

## High-Fidelity Alerting

Recorded Future Fusion allows you to customize threat intelligence before it's sent to a third-party solution, enabling you to hand-select what threat intelligence you want to use for correlation and alerting in a SIEM, or in other monitoring and alerting tools.

## Efficiently Collaborate on Internal Reports

During the research phase for a report, internal teams can document analysis in Recorded Future Fusion and tag it as belonging in a summary report. Analysts can collaborate across the team, either adding to each other's work or seeing what is completed in real time. Once the research phase is over, the team can simply export all tagged analysis and format it into the final internal summary report.

## Automated Bulk Enrichment

Automated bulk enrichment gives you the ability to import a list of indicators or entities into Recorded Future Fusion and automatically add contextualized threat intelligence for faster, more confident decisions. For example, vulnerability scan results can be imported to be contextualized with dynamic risk scores and justification, related methods and indicators from potential exploitation, and associated attack vectors and threat actors. This data can then be either imported into a separate solution or easily viewed and sorted to prioritize vulnerabilities representing the largest threats.

## About Recorded Future

Recorded Future arms security teams with the only complete threat intelligence solution powered by patented machine learning to lower risk. Our technology automatically collects and analyzes information from an unrivaled breadth of sources and provides invaluable context in real time and packaged for human analysis or integration with security technologies.
