

Security Intelligence for Healthcare

Rapid Visibility for a Proactive Security Strategy

Challenge

As healthcare organizations continue to grow their networks of connected medical devices and systems that share sensitive PII and PHI, it's no surprise that cyber attackers are targeting them. Vulnerabilities, ransomware attacks, and patient data leakage are just a few of the issues keeping healthcare security teams up at night. They need real-time intelligence to provide a comprehensive view of their threat landscape so they can proactively protect against and effectively respond to attacks.

Solution

Recorded Future arms healthcare organizations with automated security intelligence from an unrivaled breadth of external sources. Accelerate detection, decision making, and response times by positioning comprehensive, real-time intelligence at the center of your security workflows.

Vulnerability Management

The more medical devices and networks connected to your organization, the greater risk from vulnerabilities. Access to contextualized intelligence drives a more informed strategy for prioritizing vulnerabilities and identifying new exploits in real time — approximately 11 days before they're catalogued in the NVD.

Dark Web and Brand Monitoring

Real-time intelligence from the open and dark web and technical sources instantly alerts you to leaked credentials and files, typosquatted domain registrations, phishing websites, and other threats to your brand. Considering how valuable¹ medical records are on the dark web, visibility into threats targeting these assets allows you to prioritize your resources for an effective defense.

Alert Triage and Incident Response

Security operations and incident response teams need to quickly and confidently identify and respond to threats targeting their organization. Recorded Future enables these teams to make faster, more confident decisions based on external intelligence automatically correlated with internal threat data in real time — at scale across vast amounts of data, and without any manual research.

KEY FEATURES:

- Broad source coverage from the open and dark web, and technical sources
- Real-time alerting on keywords, SSNs, phone numbers, organizations, products, and more
- Advanced search capability for threat research and analysis
- Seamless integration with your existing security technologies

KEY BENEFITS:

With Recorded Future, healthcare organizations can:

- Identify threats 10X faster
- Resolve threats 63% quicker
- Increase overall efficiency by 32%

Threat Research and Reporting

When researching threats, analysts need immediate access to contextual information so they can recommend actions as fast as possible. Recorded Future delivers healthcare organizations a comprehensive view of healthcare cyber trends, cyber attacks, ransomware, data breaches, DDoS attacks, insider threats, business email compromise, and fraud scams.

Third-Party Risk Management

All healthcare organizations collaborate and share sensitive information with third parties, so it is imperative to continuously monitor and manage third-party cyber risk effectively. Recorded Future enables healthcare organizations to confidently assess third-party risk, develop strong security measures, and protect patient data.

Recorded Future scores vulnerability risk based on real-time exploitation trends, giving security teams the context they need to make faster, more confident decisions when prioritizing patches and preventing attacks.

HEALTH-ISAC INTEGRATION:

Recorded Future's integration for Health-ISAC provides real-time, actionable intelligence in a central platform, enabling member organizations to proactively protect and defend their networks.

About Recorded Future

Recorded Future delivers the world's most technically advanced security intelligence to disrupt adversaries, empower defenders, and protect organizations. Recorded Future's proactive and predictive platform provides elite, context-rich, actionable intelligence in real time that's intuitive and ready for integration across the security ecosystem.
