Recorded Future for The Vertex Project

The Vertex Project creates technology for analytical teams to provide intelligence-driven insights to security operations teams and leadership. Organizations use Synapse Enterprise as a central intelligence system for seamless fusion of data across platforms and teams and promoting more efficient and reproducible processes. With Synapse at the center of the intelligence lifecycle, analysts are empowered to work as a team to provide intelligence-driven insights to decision makers.

POWER-UP YOUR ANALYSIS & REPORTING

Synapse Enterprise customers can use Power-Ups to provide specific additional capabilities to Synapse. For example, Power-Ups may provide connectivity to external databases, third-party data sources, or enable functionality such as the ability to manage YARA rules, scans, and matches within the Synapse UI. The Synapse-Recorded Future Power-Up adds new custom Storm commands that can be used natively within Synapse. It also installs a visual Workflow from which customers can query the Recorded Future API and integrate those results into their analysis.

With this Power-Up, analysts can enrich indicators with intelligence from Recorded Future. It allows analysts to query Recorded Future's Intelligence Graph for additional context related to specific indicators and import that information into Synapse. Users can also take advantage of the Workflow installed by this Power-Up to run queries and import their findings, or use the Research or Console Tools in the Synapse UI to run Storm commands or leverage the node actions provided by the Synapse-RecordedFuture Power-Up.

Benefits

- Maximize the benefit of your Synapse Enterprise subscription
- Codify your analysis into a single system of record
- Incorporate Recorded Future intelligence into your analysis
- Product insightful reporting and actionable intelligence

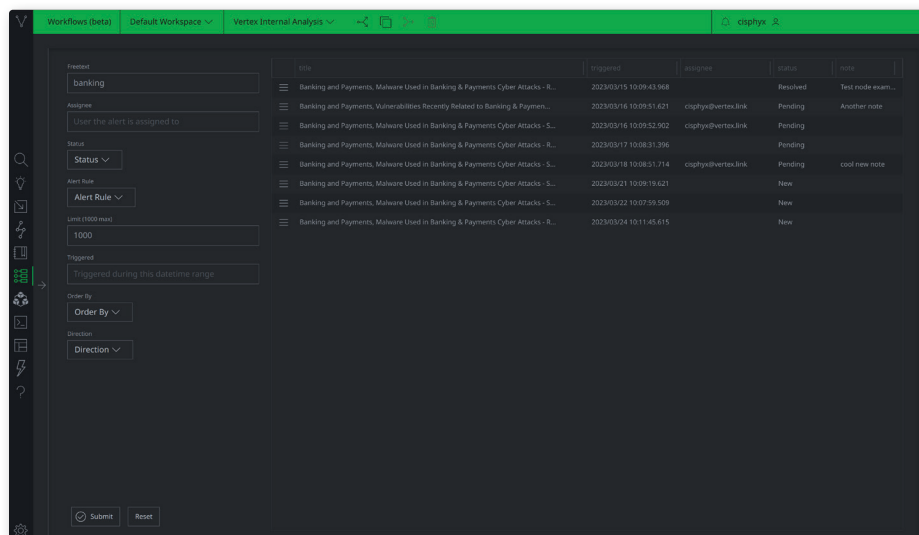

Use Cases

- Enrich IP, hash, domain, and URLs with information from Recorded Future.
- Ingest and query by Recorded Future's risk rules.
- Search for and import alerts from Recorded Future.
- Perform searches with the Recorded Future API.

REDUCE WORKFLOW DISRUPTION

Synapse Enterprise customers can use Power-Ups to provide specific additional capabilities to Synapse. For example, Power-Ups may provide connectivity to external databases, third-party data sources, or enable functionality such as the ability to manage YARA rules, scans, and matches within the Synapse UI. The Synapse-Recorded Future Power-Up adds new custom Storm commands that can be used natively within Synapse. It also installs a visual Workflow from which customers can query the Recorded Future API and integrate those results into their analysis.

With this Power-Up, analysts can enrich indicators with intelligence from Recorded Future. It allows analysts to query Recorded Future's Intelligence Graph for additional context related to specific indicators and import that information into Synapse. Users can also take advantage of the Workflow installed by this Power-Up to run queries and import their findings, or use the Research or Console Tools in the Synapse UI to run Storm commands or leverage the node actions provided by the Synapse-RecordedFuture Power-Up.

The Synapse-RecordedFuture Power-Up allows users to manage alerts from Recorded Future within the Synapse UI.

ABOUT RECORDED FUTURE

Recorded Future is the world's largest intelligence company. Recorded Future's cloud-based Intelligence Platform provides the most complete coverage across adversaries, infrastructure, and targets. By combining persistent and pervasive automated data collection and analytics with human analysis, Recorded Future provides real-time visibility into the vast digital landscape and empowers clients to take proactive action to disrupt adversaries and keep their people, systems, and infrastructure safe. Headquartered in Boston with offices and employees around the world, Recorded Future works with more than 1,600 businesses and government organizations across more than 70 countries.
