Cofense Integration Brief
Cofense and Recorded Future

Operationalize Phishing Intelligence and Incident Response
- Analyze real-time intelligence from across the open, deep, and dark web, correlate IOCs with human-verified criminal infrastructure
- Seamlessly navigate between Recorded Future and Cofense
- Use of APIaccessible relevant and contextual phishing IOCs with no false positives
- Verified high-fidelity intelligence about phishing, malware, and botnet infrastructure
- Human-readable Cofense reports to understand attacker TTPs
- Link reported events to real-time intelligence as attackers transform their operation
- Mutually supported SIEM integrations

Cofense and Recorded Future integrate for immediate visibility into your biggest cybersecurity risk — spearphishing. Pivoting between Cofense and Recorded Future extracts valuable insights analysts need to impede phishing attacks that have led to over 90 percent of the data breaches. This partnership combines human-verified and employee-reported phishing in tandem with real-time threat intelligence analyzed from the open, deep, and dark web. The end result is a more formidable approach to combat phishing threats and minimize risk of data breaches.

Real-Time Phishing Threat Intelligence and Incident Response
Cofense comprehensive human phishing defense platform focuses on fortifying your employees — your last line of defense after a phish bypasses other technologies — and enabling incident response teams to better identify, verify, and respond to targeted phishing attacks.

The powerful combination of Cofense PhishMe® and Cofense Reporter® conditions employees to resist phishing attempts, empowering them to become part of the defense by reporting malicious phishing attacks.

Cofense Triage™ enables IT security teams to automate and prioritize reported threats to speed incident response. Cofense Intelligence™ provides security teams with 100 percent human-verified phishing threat intelligence.

The integration of Cofense’s human phishing defense solutions and Recorded Future’s real-time threat intelligence from the web, delivers more efficient prevention and containment of phishing threats.

Condition Employees to Recognize and Report Threats

Speed up Incident Response
Collect, Analyze, And Respond To Verified Active Threats

Continually pivot between Recorded Future’s real-time threat intelligence alongside human-verified Cofense Intelligence
**Recorded Future**

The mission is to empower customers with real-time threat intelligence, to defend their organizations against threats at the speed and scale of the Internet. With billions of indexed facts, and more added every day, Recorded Future’s patented Web Intelligence Engine continuously analyzes the entire web to give analysts unmatched insight into emerging threats.

Recorded Future helps protect four of the top five companies in the world, and over 12,000 IT security professionals use Recorded Future every day. Recorded Future enables analysts to capture and exploit relevant threat intelligence from the entire web, in real time.

This is made possible by Recorded Future’s patented Web Intelligence Engine, which structures the latest content from the open, deep, and dark web into highly contextualized threat intelligence. As a result, analysts get the benefit of prioritizing their efforts where it matters most.

**Cofense Triage and Recorded Future**

Cofense Triage contains multiple integrations to enable security teams to spontaneously organize, analyze, and respond to suspiciously-reported employee emails. Mutual Cofense and Recorded Future customers can conduct deeper investigations by linking into Recorded Future from Triage for additional threat analysis on the indicators received.

Cofense Triage collects and prioritizes internally-generated phishing attacks from Cofense Reporter and security teams can use Recorded Future’s real-time intelligence to reference indicators like IP addresses, domains, and file hashes.

Together, Cofense and Recorded Future deliver to security teams the ability to traverse solutions that complement each other. The combination of real-time threat intelligence backed by human-verified phishing threats uniquely brings a holistic view to threats facing organizations.

**Cofense Intelligence and Recorded Future**

Cofense Intelligence and Recorded Future provide analysts with the ability to effortlessly cross reference between each solution to research indicators. An analyst investigating phishing activity within Recorded Future can instantly cross-examine using Cofense’s API against IPs, domains, or hashes. Analysts can quickly validate their research in tandem with Cofense’s human-verified intelligence and access contextual reports that provide organizations insight into the criminal infrastructure. Likewise, the analyst can connect back into Recorded Future to continue following the trail of bits from the open, dark, and deep web. Security teams gain time and insight from the ability to seamlessly move between their intelligence sources.

Cofense’s Intelligence exposes IOC data such as:

- **IOC Type:** URL, File Hash, IP Address, Domain
- **Malware Family**
- **Impact Rating**
- **Threat Report Links**
- **Infrastructure Type:** C2, Payload, Exfiltration
- **Published Date**
- **Malware Description**
- **Threat ID**

---

**About Recorded Future**

Recorded Future arms security teams with the only complete threat intelligence solution powered by patented machine learning to lower risk. Our technology automatically collects and analyzes information from an unrivaled breadth of sources and provides invaluable context in real time and packaged for human analysis or integration with security technologies.
