

# Recorded Future Fusion Hits Prime Time

*Company Announces General Availability of the Industry's Only Universal Threat Intelligence Platform*

BOSTON — APRIL 3, 2018 — Recorded Future, the leading threat intelligence provider, today announced the general availability of its new threat intelligence platform (TIP), Fusion. Now with Fusion, Recorded Future offers the only universal threat intelligence solution on the market. Fusion delivers on the promise of comprehensive threat visibility, giving teams what they need to make faster, more confident decisions by layering rich external threat intelligence across security processes.

Fusion features include the ability to add proprietary feeds, internal lists, and customer-generated notes to Recorded Future's all-source platform, and then customize the data before integrating it into third-party security solutions. Fusion provides unprecedented analysis of the broadest and most comprehensive set of open and closed feeds, internal risk lists, and internally generated analyst notes.

A sample of Fusion use cases follows:

## *Use Fusion for High-Fidelity Alerting*

With Fusion's ability to customize threat intelligence before it's sent to a third-party solution, organizations are now able to hand-select what threat intel they want to use for correlation and alerting in a SIEM, or other monitoring and alerting tools. In addition, the process is quite simple, using Recorded Future's intuitive web UI for selecting and manipulating data.

## *Fast Decisions With Automated Bulk Enrichment*

Now, customers can import a list of indicators or entities into Recorded Future and automatically add contextualized threat intelligence for faster, more confident decisions. Just two applications of imported proprietary and exclusive-access lists include better prioritization of vulnerability patching and added context to indicators for strategic decision making.

## *Collaborate on Internal Threat Intelligence Summary Reports*

Read by executives and team leaders, internal threat reports serve as a main communication method for threat intelligence across all levels of an organization, but they've been historically challenging to effectively merge with external reporting.

With Recorded Future Fusion, organizations can centrally store, manage, and update the internal report data all on a single platform. No need for manual integration. No need for multiple reports.

### *Operationalize Threat Indicators for Streamlined Action*

Following research and investigations, track verdicts and reasoning within Recorded Future. Indicators that should be added to the block list can be easily tagged as such and automatically added to the block list for integration with third-party solutions.

### **About Recorded Future**

Recorded Future delivers the only complete threat intelligence solution powered by patented machine learning to lower risk. We empower organizations to reveal unknown threats before they impact business, and enable teams to respond to alerts 10 times faster. To supercharge the efforts of security teams, our technology automatically collects and analyzes intelligence from technical, open web, and dark web sources and aggregates customer-proprietary data. Recorded Future delivers more context than threat feeds, updates in real time so intelligence stays relevant, and centralizes information ready for human analysis, collaboration, and integration with security technologies. 91 percent of the Fortune 100 use Recorded Future.
